

Use Case Name

(A brief summary of your use case. Limit to 100 Characters.)

Goal

(Why are you connecting to the Mass Hlway or another Health Information Exchange (HIE)? What is your end goal? For example, you may want to reduce the number of duplicative tests patients receive or reduce the number of hospital readmissions. Be as specific as possible.)

Trading Partners and Systems

(Who is your trading partner(s)? Who are the sending and receiving organizations – the “trading partners”? What systems/data sources are involved, for example: the in-patient or out-patient system, the data warehouse?)

Data to Exchange

(What data is being exchanged and in what format do you intend to exchange? For example, you may want to send a discharge summary or a summary of care record formatted as a Consolidated CDA, C32, text file or a .pdf.) Are you sending or receiving information, or both? (If sending, can you create the data set? If receiving, can you “consume” the data set?)

Story

(What is the story you are trying to implement? How do you intend to use the Mass Hlway or other Health Information Exchange (HIE)? Describe the steps required to exercise your use case. This should tell the story of how you intend to use the Hlway or other HIE, but also support initial project scoping efforts.)
